

Elmira's longitude is $76^{\circ}50'W$

Generalized Bedrock Geology of New York State

Before you begin:

1. Draw latitude lines using **RED**
2. Draw longitude lines using **Green**

* Between degrees of Latitude & Longitude are 60' (sixty minutes of space).

So, half way between 42° and 43° would be $42^{\circ}30'N$ or $42.5^{\circ}N$. Recognize both.
